1. Claims 1-35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The applicant states that portions of the cartridge "take a lower position" or "takes a downstream position" which is awkwardly phrased and confusing.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in–

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1-35 are rejected under 35 U.S.C. 102(e) as being anticipated by Matsuzaki et al.

Matsuzaki et al. teach an image forming apparatus having a process cartridge 15 which is mountable to the image forming apparatus. The process cartridge includes a frame, a photosensitive drum, a charging member, a developing member and a developer accommodating portion. The process cartridge has an engaging member 20 which is received by a movable portion 29a connected to a handle 31. The cartridge includes first, second, and third guiding portions

20A,20B,15c which support the process cartridge. In addition a positioning portion 22 projects from the cartridge. By rotation of the handle the cartridge is lowered into a mount position.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Oda et al., Suzuki et al., Bellis, and Fujiwara (JP) all teach various removable process cartridges.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert Beatty whose telephone number is 703-308-1372. The examiner can normally be reached on M-F from 9 to 6.
